

FEATURES:

- Flexure suspension allows stiction free motion of the mirror with an infinite fatigue lifetime
- Built in optical sensor allows the user to monitor both axes of mirror motion
- Moving magnet design allows coils to be heat sunk to the mirror base structure
- New coil design eliminates coil overheating problems, no need to monitor coil temperature
- Removable optical table mounting foot allows easy mounting to standard optical tables
- Mirror coating to customer requirements
- Wave-front quality 1/4th wave rms
 - Substrate 1/4th wave p-v
- Useable aperture 1.8"

Model OIM102 features a 2" glass mirror substrate. Standard coating protected aluminum. Contact Optics In Motion for custom mirror coatings.

A built in high precision optical sensor monitors mirror angle. The compact optical head is attached to a servo controller using a supplied 6 foot cable. The user inputs analog mirror command to the controller to steer the mirror.
